

SPA

ALTERNATING POLE MAGNETIC SEPARATOR

ITR is specialized in the **development and manufacturing of complete recycling lines and plants for the treatment of ferrous and non-ferrous metal waste**; on request it develops and manufactures custom-made machinery and/or projects for new lines or existing plants, offering assembly and start-up services at the customer and on-site continuous assistance and service.

The ITR SPA separation system is **an independent separation system**, equipped with an alternating pole magnetic separator fed by a vibrating table with treads for correct material dosing.

The system is managed by a dedicated control panel.

It is used for the refining phase in treatment plants of:

Electric motors: it ensures perfect cleaning of the ferrous fraction from copper wire for a high quality output product;

Harmonic steel from PFU: it allows the cleaning of the ferrous fraction from rubber and textile parts;

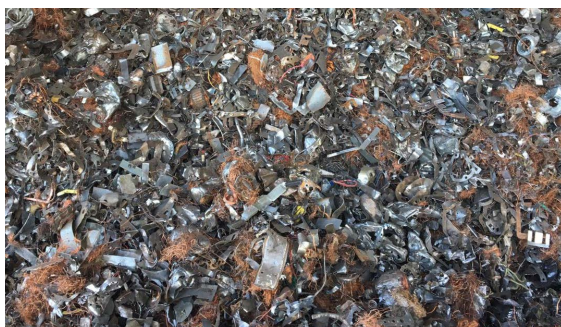

Non-ferrous metal shavings: they are optimally separated from the ferrous fraction.

PROCESSED MATERIAL

Electric motors

Harmonic steel

TECHNICAL DETAILS

Model	Width of magnetic separator mm
ITR SPA 060	600
ITR SPA120	1200
ITR SPA 180	1500
