

HMM 060 - 080

MOBILE HAMMER MILLS

The mobile hammer mills **HMM series** are designed in order to obtain the **maximum yield in the processing of ferrous and non-ferrous metals**.

They are grinding systems that can be easily handled, they are **installed on sliding bed**, complete with magnetic separation and material extraction system: the result is **a compact grinding and selection plant**, able to satisfy the different production and space needs.

They are characterized by the **wide possibility of configurations**, the hydraulic handling for the main components and the quick replacement of the grids, which allow the maximum flexibility of use, a **net increase in the production capacity and the reduction of operating costs**. The management is simple and intuitive, with programs that can be saved according to the type of material to process.

The **HMM series** hammer mills can be **perfectly integrated in the smart factory systems 4.0**.

Screens, vibrating conveyors, conveyor belts and air extraction systems are available to completion of the plants.

PROCESSED MATERIAL

Aluminium scrap treatment plant

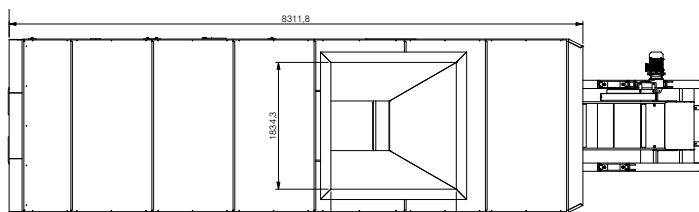

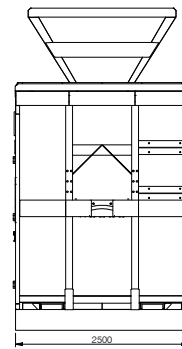

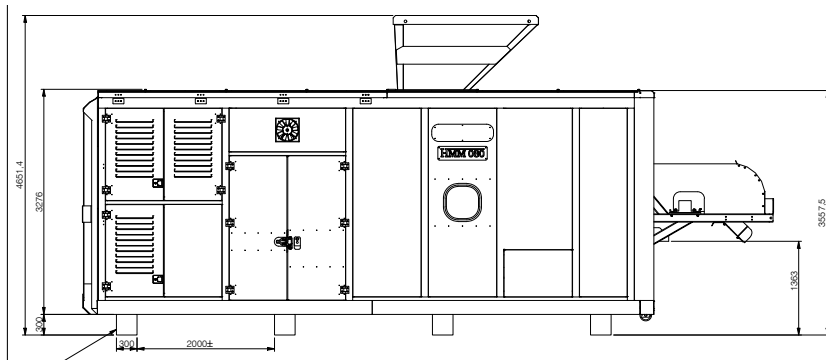

Tins and cans from MSW treatment plant

Electric motors treatment plant

TECHNICAL DETAILS

Model HMM 080

Model	Hammers No.	Cutting chamber mm	Power kW	Hourly production Tons/h*
HMM 060	20	600	90-110	Up to 3-4
HMM 080	20	800	132-160	Up to 5-6

Hourly production can change depending on the type of processed material and the type of installed grid.
